- Different tools a dentist uses

## Purpose Statement

I am making a dentist game for ages 7-15. The reason I am making this game is to get people interested in the field of medicine while also having fun.

## 3 Brainstorm ideas

- The game is for older children who are already interested in the field of dentistry. This game includes all of the different tools used by a dentist while also naming every tool. This game is like a quiz game. You need to make the tool names to the tools. Then, you look at the patient and you have to write how you would cure them and then you would cure them.
- This game is for younger children. You pick a patient and then they highlight what tools to use for each patient and then you use the tools to help cure the patient.
- This game is for people in between. In this game, you don't need to match anything, but you must know what is the name of each tool otherwise you will not be able to cure the patient. If you use the wrong tool, it restarts and you must start again. Every player has three hints per patient.
